

STEPS

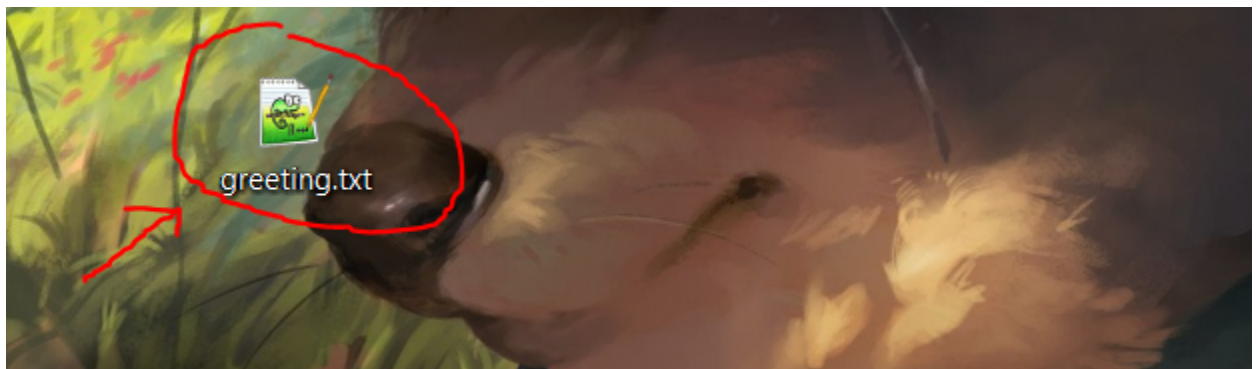

- Locate the file called **run.cmd**.

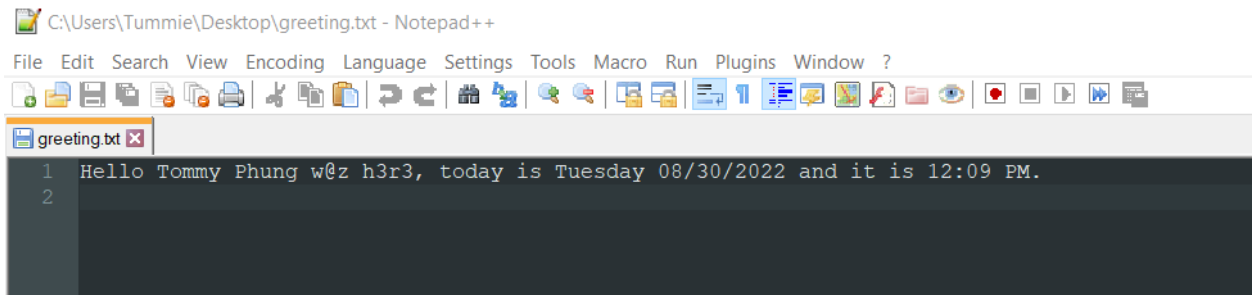

- Run the command line executable. It should pop up with a command line prompt asking for a full name. Currently there is no restriction on the type of characters, so it will accept any characters and symbols as shown below:

- Once the desired name is entered, the **run.cmd** will disappear, and generate a file called **greeting.txt**. This file by default will be stored onto your "C:\Users\Username\Desktop"

- Open the file with any text editor (such as notepad) to confirm the text file has been generated correctly as shown below.

A screenshot of the Notepad++ text editor. The title bar reads "C:\Users\Tummie\Desktop\greeting.txt - Notepad++". The menu bar includes File, Edit, Search, View, Encoding, Language, Settings, Tools, Macro, Run, Plugins, Window, and ?. The toolbar contains various icons for file operations and editing. The editor window shows a single tab labeled "greeting.txt". The text content is as follows:

```
1 Hello Tommy Phung w@z h3r3, today is Tuesday 08/30/2022 and it is 12:09 PM.  
2
```

- Once confirmed, the script is complete.
